

CONTENTS

Preface	7
Chapter 1. Gateways to mathematics	8
1.1. Sets and operations on them. Number sets	8
1.2. The concept of a complex number, an rectangular form of its notation	16
1.3. Modulus and argument. Trigonometric and exponential forms of a complex number	22
1.4. Polynomials. Operations on polynomials	33
1.5. Rational fractions	40
<i>Task answers</i>	48
Chapter 2. Matrices and determinants. Systems of linear equations	51
2.1. Matrices and operations on them	51
2.2. Determinants	60
2.3. Inverse matrix. Matrix rank	68
2.4. Systems of linear algebraic equations	74
<i>Task answers</i>	82
Chapter 3. Vector algebra	85
3.1. Vectors and operations on them	85
3.2. Operations on vectors in coordinate form	91
3.3. Scalar product of vectors	97
3.4. Vector product	102
3.5. Triple product of three vectors	106
3.6. Polar coordinate system	110
<i>Task answers</i>	113
Chapter 4. Analytic geometry	115
4.1. Straight line on a plane	115
4.2. Second order curves	123

4.3. Plane in space	132
4.4. Straight line in space	136
4.5. Second order surfaces	142
<i>Task answers</i>	148
Chapter 5. Function. Limit of sequence and function	151
5.1. The concept of a function, its properties and a graph	151
5.2. Number sequence	160
5.3. The limit of a sequence	164
5.4. The limit of a function at a point and at infinity	170
5.5. Remarkable limits	179
5.6. Equivalence of infinitesimal functions	185
5.7 One-sided limits. Asymptotes of a graph	190
5.8. Function continuity. Function breakpoint classification	196
<i>Task answers</i>	203
Chapter 6. Differential calculus	207
6.1. The concept of a derivative. Differential	207
6.2. Derivative of a composite function	215
6.3. Geometric and physical meaning of the derivative. Calculating limits using a derivative	222
6.4. Logarithmic differentiation. Differentiation of functions defined parametrically and implicitly	228
6.5. Derivatives and differentials of higher orders	234
6.6. Monotonicity of a function and extremes	242
6.7. Function research	251
<i>Task answers</i>	258
Chapter 7. Functions of several variables	264
7.1. The concept of a several variables function	264
7.2. Partial derivatives and the first-order differential. The derivative in the direction. Gradient	269
7.3. Partial derivatives and differentials of higher orders	278
7.4. Tangent plane and normal to the surface. Extremes of a function of two variables	285
<i>Task answers</i>	291

Chapter 8. Indefinite integral	295
8.1. The concept of an indefinite integral and its properties. Table of integrals	295
8.2. Substitution method and insertion into differential method	300
8.3. Integration by parts	306
8.4. Integration of some expressions containing a square trinomial ..	310
8.5. Rational functions. Integration of the simplest fractions	315
8.6. Integration of trigonometric functions	324
8.7. Integration of irrational functions	331
<i>Task answers</i>	337
Chapter 9. Definite integral. Improper integrals	342
9.1. The concept of a definite integral and its properties	342
9.2. Methods for calculating a definite integral	347
9.3. Applications of a definite integral	354
9.4. Improper integrals	367
<i>Task answers</i>	380
Chapter 10. Differential equations	382
10.1. Differential equations of the first order. Separable variables differential equations	382
10.2. Homogeneous differential equations. Equations that reduce to homogeneous	387
10.3. Linear differential equations of the first order. Bernoulli's equation	394
10.4. Exact differential equations	400
10.5. Differential equations of higher orders	405
10.6. Linear non-homogeneous differential equations	416
<i>Task answers</i>	433
Chapter 11. Series	437
11.1. Numerical series. Series of positive terms	437
11.2. Numerical series with alternating signs of terms	447
11.3. Functional series	452
11.4. Power series	457
11.5. Fourier's series	466
<i>Task answers</i>	474

Chapter 12. Double integral	478
12.1. The concept of a double integral, its properties and calculation in Cartesian coordinate system	478
12.2. Calculation of the double integral in the polar coordinate system	489
12.3. Applications of the double integral	493
Task answers	502
Chapter 13. Line integrals	504
13.1. The concept of the 1st type line integral, its properties and calculation	504
13.2. The concept of the 2nd type line integral, its properties and calculation. Green's formula	514
13.3. Applications of line integrals	522
13.4. Independence of the 2nd type line integral from the path of integration	528
Task answers	532
Chapter 14. Linear spaces and linear operators	534
14.1. Linear space, definition and problems	534
14.2. Euclidean space, definition and problems	539
14.3. Linear operators. The matrix linear operator	543
14.4. Eigenvalues and eigenvectors linear operator	552
Task answers	556
